

## **AMENDMENTS TO THE SPECIFICATION**

**Please replace the paragraph beginning at page 1, line 17, with the following rewritten paragraph:**

In the radio packet communication mode that is stipulated in, for example, IEEE802.11, a power-save mode is established in which a receiver is periodically activated (~~woken up~~) (awakened) and packets are transmitted and received. An outline of the operation of the power-save mode in IEEE802.11 is next briefly described with reference to Fig. 1.
